

BUTTERFLY VALVES

High-performance but

S14-WEA & D14-WEA

SELF-SEALING MECHANISM ENSURES TIGHT SHUTOFF

As illustrated, Fluid pressure to the disc and seat ring from both side ensure a secure seal, that means the higher fluid pressure the better sealing performance.

THE FURUKAWA'S S14-WEA&D14-WEA

Series is a high performance butterfly Valve designed to suit critical fluids that are not easy to control with general purpose butterfly Valves. Featuring a self-sealing seat ring, double eccentric disc and a choice of several kinds of materials for seal rings, the S14-WEA&D14-WEA Valve could take over the perform of ball valve and gate valve even the fluids such as corrosive slurry and High pressure Stream can be perfectly controlled.
